Masana Mabasa

Front-end Developer

Pretoria , South Africa 

"Front-end developers are the architects of the digital world, translating design into reality and creating immersive user experiences."

ABOUT

I am currently studying Mechatronic Engineering at Tshwane University of Technology and also enrolled with SheCodes. I'm a passionate front-end developer with a love for crafting intuitive and visually appealing web experiences. With a solid foundation in HTML, CSS, and JavaScript, I have honed my skills in transforming design concepts into interactive and responsive websites. I strive to create seamless user experiences by leveraging the latest web technologies and following best practices in front-end development. By combining my HTML, CSS, and JavaScript skills with API integration and data visualization techniques, I was able to create a robust and visually appealing weather website that offers accurate and user-friendly weather information.
